Static Website Hosting using AWS S3

Goal

Host a static website using AWS S3 and make it publicly accessible.

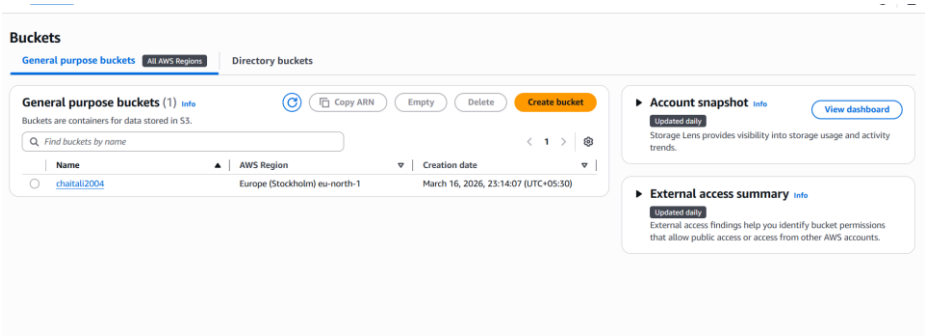
Requirements

- Create bucket + enable static hosting
- Upload HTML/CSS/JS files
- Set public permissions / bucket policy
- Access website through public URL

Implementation Steps

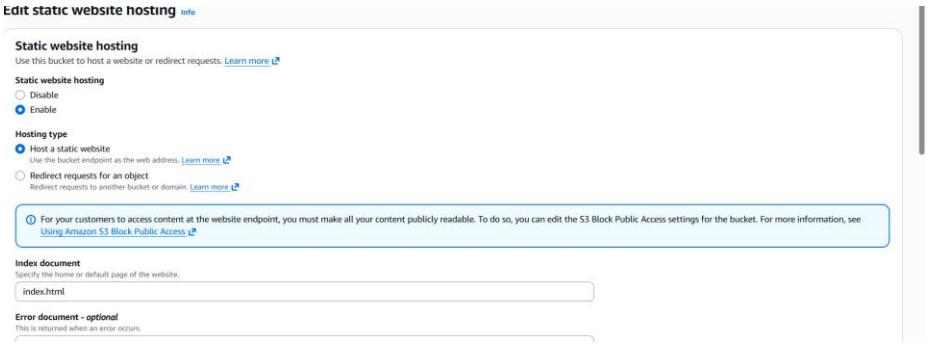
1. Create S3 Bucket

Created a bucket named "chaitali2004" in region eu-north-1 and disabled block public access.



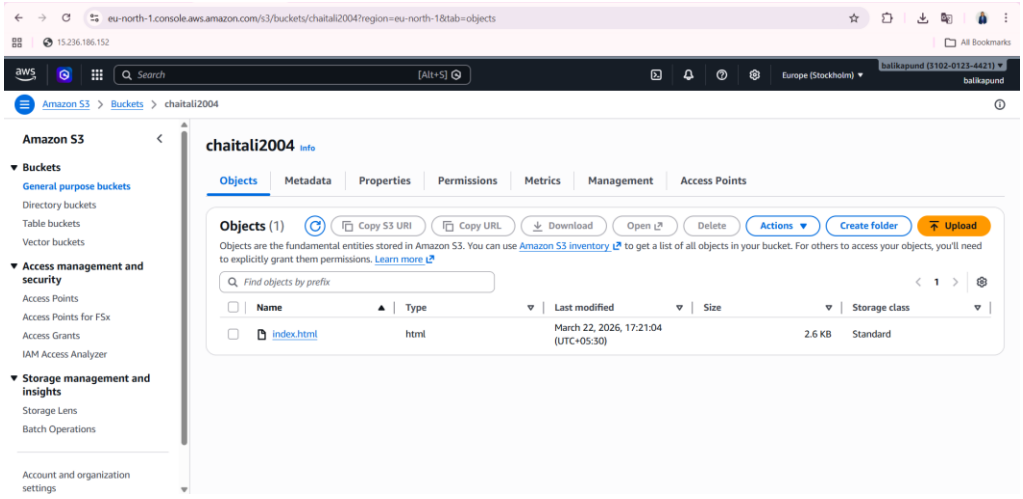
2. Enable Static Website Hosting

Enabled static website hosting and set index document as index.html.



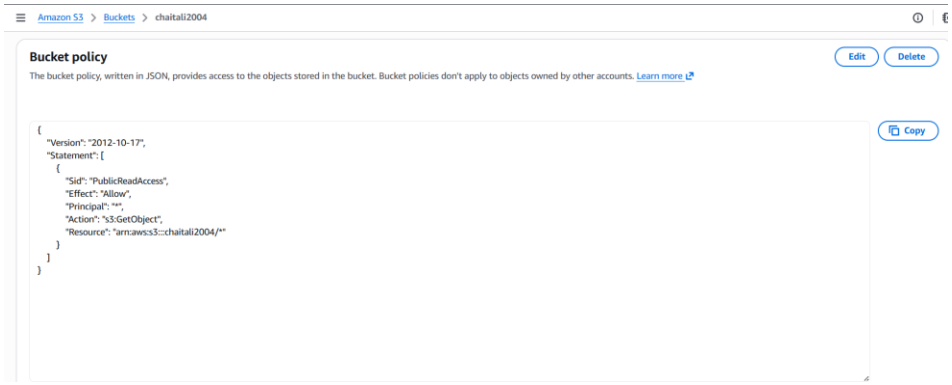
3. Upload Files

Uploaded index.html, style.css, and script.js directly into the bucket root.



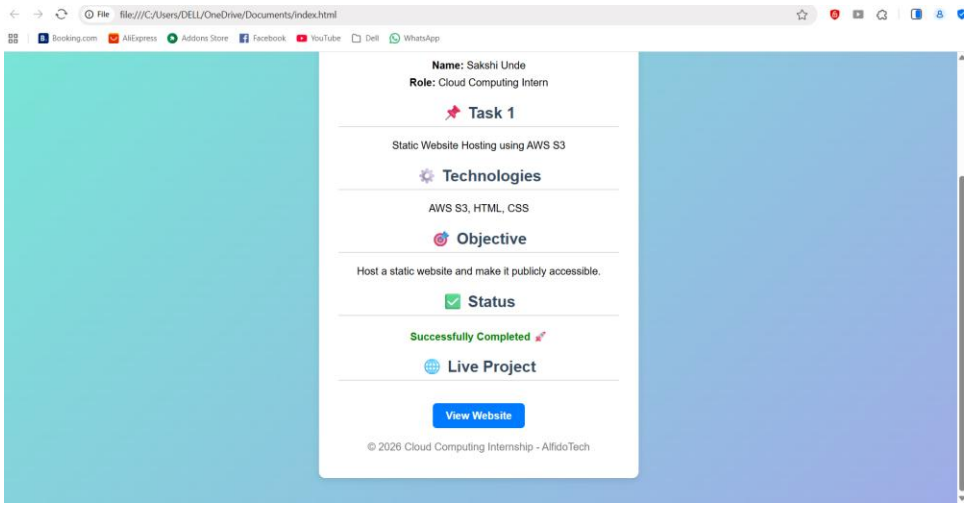
4. Bucket Policy

Added bucket policy to allow public read access.



5. Access Website

Opened the website using the S3 endpoint URL.
http://chaitali2004.s3-website-eu-north-1.amazonaws.com



Conclusion

Successfully hosted a static website using AWS S3 and made it publicly accessible.
